

A-SERIES Mouvex Technology

Eccentric disc pump

Exceptional Self-Priming Capabilities

The design of the A-Series pumps, utilizes an eccentric disc according to the Mouvex principle, this enables self-priming, even when dry, and pipe clearing.

Legendary ruggedness

The A-Series pumps maintain their initial performance level over time without any adjustment thanks to the automatic clearance make-up system.

Unchanging characteristics

Even if the viscosity of the fluid changes considerably, the A-Series pumps maintain a regular and constant output, independent of the delivery pressure.

Practically unlimited scope of application

A-Series pumps are perfectly adapted to the transfer of fluid whether it be viscous, non lubricating, volatile or delicate (no shear effect).

ATEX certification

II 2 G II B T2, T3, T4, T5

(according to pumped product temperature)

Can run dry in ATEX environment.

A-SERIES Mouvex technology- Eccentric disc pump

Reversibility

The unique design of the A-Series pump allows the unit to be continually run in reverse. This enables pumping back of products.

Excellent efficiency

The unique eccentric disc principle ensures a smooth transfer (low rotary speeds) as well as an excellent efficiency.

Wide variety of applications

For many years, A-Series pumps have proven they are capable of meeting the requirements in hugely varied applications:

Chemistry, para-chemistry
(detergents, glues, inks, paint, etc.)

Food industry
(molasses, oils, fatty substances, tallow, etc.)

Road works
(asphalt, emulsions, thermal fluids, etc.)

Petroleum
(fuel, heavy fuel oil, etc.)

Construction

Pump body

A : Cast-iron,
Bronze and Steel

**Single
piece cylinder**

O : Cast-iron
and Steel

Disc

I* : Stainless steel Cast-iron
(Ni-resist) and stainless steel

end plate

***** : Except AR type

All pump models are fitted with self-lubricating carbon bushings and mechanical shaft seal.

The eccentric disc-Mouvex Technology

When the disc moves inside the cylinder (stationary), driven by the eccentric bearing installed on the shaft, it makes four chambers that increase and decrease in volume inside the pump body producing the suction and discharge.

These chambers move in pairs 180° apart, thus ensuring that the fluid passes through the pump at a constant and regular flow rate.

Performances

Features

TYPE OF POMPE	AZ	AD	AF	AK	AK-HP	AL	AL-HP	AM	AR
Maximum flow rate (m³/h)	1,2	2,3	5,7	11,7	6	18	11	31	50
Maximum speed (rpm)	1500	750	600	500	500	450	450	400	350
Suction and discharge ports with welded or threaded flanges	1"	1" 1/4	1" 1/2	2"	2"	2" 1/2	2" 1/2	3"	4"
Total pressure (bar)	3 to 5 depending on use, HP version up to 10 bar								

Please call us for information on any other specific characteristic.

Options

- Double bypass for protection when operating in both directions.

- Heating or cold jacket for transferring products that can solidify at ambient temperature.

- High temperature: HT version for AF and AK models enables high temperature transfer (up to 250°C).

Power unit	33	78	118	125	156	160	255	362	442

*AZ units: V-belt.

Units

- Electrical motors or internal combustion engines
- Drive possible with electric motor, built-in geared motor or variable speed motor (mechanical or electrical).
 - Units installed on chassis or mobile version.

motor pump unit

A-Series pumps, double bypass
